

Lyon NF5482 Type I Terne Plate Steel Safety Can with Single Spout, 2 Quart Capacity, Red

The Lyon terne plate steel Type I safety can is used to store, transport, and dispense flammable liquids safely, and has a single spout for filling and pouring. The can is made of 24-gauge terne steel, which is resistant to corrosion and certain chemicals. Gauge is a measure of thickness (the lower the gauge, the thicker the material). The red enamel paint finish resists wear. A flame arrester helps prevent liquids inside the can from igniting and keep flames from spreading. Spring-mounted relief vents allow internal vapors to disperse. The can is seam welded to help prevent leaks. A metal strip on the handle frame facilitates grounding and helps prevent static sparks. The spout measures 1-5/8" in diameter. Hazardous storage cans are used to safely store, transport, and dispense flammable or hazardous liquids. They are typically made of polyethylene, 24-gauge galvanized steel, or 24-gauge stainless steel. (Gauge is a measure of thickness; the lower the gauge, the thicker the material.) Hazardous storage cans come in a variety of styles, such as Type I cans, which have a single spout for filling and pouring, and Type II cans, which have a flexible metal hose for pouring and a second opening for filling. They are often color-coded for different liquids (for instance, red cans for gasoline, blue cans for kerosene, yellow cans for diesel fuel, or green cans for oil). Other common features include flame arrestors, which help prevent the liquid inside the can from igniting, and seam welds, which help prevent leaks. Certain hazardous storage cans are FM Approved, and many meet National Fire Protection Association (NFPA) and Occupational Safety and Health Administration (OSHA) standards for the storage and handling of flammable liquids. Hazardous storage cans are used in a variety of commercial and industrial environments and can also be suitable for home use. Lyon Workspace Products manufactures lockers, industrial storage products, and workspace products. The company, founded in 1901, is headquartered in Montgomery, IL.
